Parent Function Warmup

1. Use a parent function t-chart to find the transformed x and y values for the function $\boxed{g(x) = \sqrt{x-1}+1}$. What is the PF of g(x)?

Tx ⟝	PF	⟞ Ty
x	y	
0		
1		
4		
9		

2. Sketch the functions $\boxed{f(x) = \sqrt{x}}$ and $\boxed{g(x) = \sqrt{x-1}+1}$ on the grid below

3. What are Rules # 1 and # 2 for finding Transformations of Parent Functions?

4. Open Geogebra, and use the slider tool to make a slider "a" that has a value between 0 - 5. Then graph the function $\boxed{f(x) = \sqrt{x-a}}$. What happens as the value of a changes?
