1. A function is defined by $\boxed{f(x) = x^3 - 2x^2 - 3x - 1}$.

- **A.** Graph f(x). Label any Inflection Points (IP), or Local Min or Max points (M)
- **B.** Graph f'(x) What happened to the IPs?
- **C.** Graph f"(x). What happened to the Ms?
- **D.** Complete the sentence. IPs become _____ in the graph of the first derivative of a function, which become _____ in the graph of the second derivative.

2. Explain the graphs of $\boxed{g(x) = x^3 - 3x - 1}$ and its derivatives.
